

Working with the Agricultural Conservation Planning Framework (ACPF) National Hub: How the National Hub can help you use the ACPF in your conservation planning processes

The ACPF National Hub is a multi-institutional collaboration working to improve agricultural conservation planning processes and help communities and agencies achieve soil and water quality goals.

Together, the National Hub team works to:

- Maintain and enhance a repository of core data, results data, and GIS tools
- Provide training and outreach resources
- Coordinate a network of ACPF users
- Offer ACPF user support
- Collaborate on ACPF-related research

Connecting with other ACPF users in your state or area can help you assess how the ACPF can help meet state- and community-level needs. The ACPF National Hub can help connect you to other ACPF users and help create state-based ACPF user-groups so you can better reach your goals!

PLANNING	COLLECTING DATA AND RUNNING THE ACPF	ANALYZING THE RESULTS	APPLICATION AND EVALUATION
Identify other ACPF users and stakeholders	Download the ACPF toolbox and core data if available	Use local knowledge and field verification to validate and update results	Use ACPF results in conservation planning
Determine where ACPF has been used in your area, if toolbox results already exist, and their suitability	Determine if new core data are needed and locate data sources	Re-run the ACPF and update results	Coordinate participation in the Watershed Applications Training
Convene partners at the state and/or regional level	Participate in the Technical Training	Determine how the ACPF results integrate into your existing conservation planning efforts and watershed goals.	Provide feedback and share results with the National Hub and the ACPF community
Determine your training and data needs	Run the ACPF tools		
	Troubleshoot technical issues
